Among the compounds related to the nucleic acids,
purine pyrimidine bases, nucleosides, 2'- and 3'-
mononucleotides and polynucleotide do not have a
taste practically, if they are alone, whereas 5'-mono-
nucleotides of 6-hydroxypurine derivatives exhibit a
specific taste. The specific and remarkable syner-

DESCRIPTORS: *Chlorides, *Alkaline earth metals,
Dehydration, Fused materials, Magnesium compounds.

Four kinds of hydrated alkaline earth metal chlorides
were thermodehydrated in air. The relation between
time, amount of residual water and the amount of
decomposed material at each temperature is discussed.
The dehydrated salt which contains extremely small
amounts of decomposed material was obtained at low
temperatures by dehydrating hydrated magnesium
chloride in the three kinds of dry-gas streams. (Author)
